
Daily Price

API

Example request

```
endPoint = "http://www.bletchleyindexes.com/daily/ten";  
requests.get(endPoint).text
```

The response is a json array of 3 fields:

```
time: in milliseconds from epoch  
pxBtc: the price in bitcoin of the index at that time  
pxUsd: the price in US dollars of the index at that time
```

Example response:

```
[  
  {  
    "time": "1518233188726",  
    "pxBtc": "0.00943229859182764287",  
    "pxUsd": "84.5807419947213219"  
  },  
  {  
    "time": "1518319527682",  
    "pxBtc": "0.00918424425296507363",  
    "pxUsd": "74.2234801972050633"  
  },  
  {  
    "time": "1518405921657",  
    "pxBtc": "0.00914714570885927919",  
    "pxUsd": "77.8383681811947383"  
  }  
]
```

End point naming convention:

```
/daily/<indexName>  
to get the even weighted version:  
/daily/<indexName>/even
```
